Technical specification for installation of 150S-FP adapter

150S-FP WELD-ON ADAPTER

On weld-on adapter mod.150S-FP are present 8 reference lines, corresponding to pipe internal diameter, from DN=40 to DN=200. To obtain a correct assembling of the adapter, the reference corresponding to the nominal pipe diameter, must be aligned to the internal pipe edge.

To get the immersion level of the adapter with known nominal diameter of the pipe, you can use the formula: $H = (0,12 \times DN) + 3,5 \text{ mm}$

Assembling direction according to pipe
